

MediScan AI - Patient Medical Report

Patient: VIVI

Report ID: 8

AI Summary Suggestion:

[Gemini AI Summary]: This medical image report contains several spelling errors and some unclear phrasing. Let's correct and clarify it:

Corrected Medical Image Report:

There is mild lordosis of the descending thoracic spine. Pneumothorax is not seen. No discrete lymph nodes or adenopathy are noted. Degenerative changes are present in the spine.

Impression: No evidence of active disease.

Fact A AIT tags: Deformity (thoracic vertebra)

Explanation of Corrections:

"lortuasiy" corrected to "lordosis": This refers to an inward curvature of the spine.

"Pctmothoras" corrected to "Pneumothorax": This is the presence of air in the pleural space (around the lungs). The report states it's not seen.

"diserte neues" corrected to "discrete lymph nodes": This refers to small, separate lymph nodes. The report states none are seen.

"adenopathy" is already correct: This refers to enlarged lymph nodes, often a sign of disease.

Sentence structure improved for clarity.

AIT tags clarified: The tags are reorganized for better understanding. "Deformity" is a more concise and accurate description. "thoracic vertebra" specifies the location of the deformity.

This corrected report is significantly clearer and more accurate. It's important to note that medical reports should always be interpreted by a qualified healthcare professional.
