### Extracted OCR Text:

?Medical Image Report

There is mild lortuasiy? to the descending

Pctmothoras is seen. No diserte neues

fr adenopathy are noted. Degenerative

changes are present inthe spine.

Impression: No evidence of aotve disease

Fact A AIT tags: Deformiyithorace veicbrachmil

### AI Summary Suggestion:

[Gemini AI Summary]: The medical image report contains several typos and uses some unclear terminology. Let's correct and clarify:

**\*\*Corrected Report:\*\***

**\*\*Medical Image Report\*\***

There is mild lordosis of the descending thoracic spine. Pneumothorax is not seen. No discrete

nodes or adenopathy are noted. Degenerative changes are present in the spine.

**\*\*Impression:\*\*** No evidence of active disease.

**\*\*Fact A AIT tags:\*\*** Deformity (thoracic vertebra)

**\*\*Explanation of Corrections:\*\***

\* **\*\*"lortuasiy" corrected to "lordosis":\*\*** Lordosis is a normal inward curvature of the spine, particularly in the lumbar region. The report likely refers to a mild exaggeration of this curve in the descending (lower) thoracic spine.

\* **\*\*"Pctmothoras" corrected to "Pneumothorax":\*\*** Pneumothorax is a collapsed lung. The report states it is *not* seen.

\* **\*\*"diserte neues" corrected to "discrete nodes":\*\*** Discrete nodes refer to separate, distinct lumps or nodules, often indicative of lymph node involvement.

\* **\*\*"fr adenopathy" corrected to "or adenopathy":\*\*** Adenopathy refers to swollen lymph nodes.

\* **\*\*Grammar and Punctuation:\*\*** Minor grammatical and punctuation errors have been corrected for clarity.

The "Fact A AIT tags" section seems to be a structured way to tag findings. The corrected version reflects the meaning more accurately. It implies a deformity of a thoracic vertebra which could be related to the degenerative changes noted in the spine.
